J&L SHUTTERS INTRODUCES PERMEX HURRICANE SHUTTERS TO THE MARKETPLACE

For Immediate Release

Contact: Barbara P. Hedding 843.795.1420, e-mail: bhpr@dycon.com

J&L Shutters is proud to introduce PERMEX Hurricane Shutters to the marketplace. These fully functional shutters are the first and only synthetic exterior shutter to pass the rigorous Dade County, FL impact and wind load tests.

“Dade County regulations require that a shutter resist a 2x4 board’s impact of 140 mph, an increased wind-load standard, plus positive and negative pressure loads test and a recovery test,” says a J&L spokesman, “and PERMEX passed the tests with flying colors!” PERMEX Hurricane Shutters also meet the Southern Building Contractors Congress Institute Standards (SBCCI), which requires that the product withstand 110 mph winds.

Because of the recent hurricanes that have developed along the east coast, most insurance companies will increase premiums from 2-15% if a homeowner does not have compliant shutters. Since PERMEX Hurricane Shutters offer approved hurricane protection, more architects, builders, designers, and homeowners are specifying them when building a house, giving PERMEX a unique niche in the industry.

PERMEX Hurricane Shutters are available in variety of sizes and styles. Choose from a palette of 14 colors. PERMEX also offers a line of hardware for ease of installation.

PERMEX Hurricane Shutters, setting the standard in the industry today!
